

Math Studies Algebra: homework #11*

Due 16 November 2016, at start of class

Collaboration and use of external sources are permitted, but must be fully acknowledged and cited. For your own learning, you are advised to work individually. Collaboration may involve only discussion; all the writing must be done individually.

Homework must be submitted in L^AT_EX via e-mail under the same rules as the previous homeworks.

1. Let R be a commutative ring with the identity, and $a \in R$ arbitrary. Let m, n be positive integers and $d = \gcd(m, n)$. Show that $(a^m - 1, a^n - 1) = (a^d - 1)$.
2. Show that a principal ideal domain R is a discrete valuation ring only if R contains a unique maximal ideal.
3. Let R be a principal ideal domain. Let I, J be ideals in R . Show that $I \cap J = IJ$ if and only if I and J are comaximal. Give an example showing that the result is false if R is an integral domain, but not a principal ideal domain.
4. Let R be a principal ideal domain, and let D be a multiplicative set. Show that $R[D^{-1}]$ is a principal ideal domain.
5. What are the units in $\mathbb{Z}[i]$?
6. (Bonus problem) Show that the only automorphism of the ring \mathbb{R} is the identity map.
